

## Sour-Dee 0-0-2

**Sour-Dee** provides potassium, along with a carbohydrate and electrolyte source. **Sour-Dee** proprietary formula contains polysaccharides folded into a mineral matrix. This formulation acts as a compensator during lowered, end of season sunlight levels. Lowering light levels can cause a drop in photosynthetic rate and ATP (plant-sugar) production, essentially starving the plant of necessary energy. The additional carbohydrates in **Sour-Dee**, fuel the metabolic processes required to drive fruit set, flower set, and produce heavy yields. **Sour-Dee** was formulated for plants with more of a pungent (skunky) fragrance. **Sour-Dee** assists the plant in building upon its natural terpene footprint. **Sour-Dee** will not make your plants taste, or smell like apples. **Sour-Dee** is a must use, in any aromatic plants feeding schedule.

### Primary Benefits

- Improved fragrance
- Stronger fragrance
- Higher sugar content in fruits and flowers
- Environmental stress relief and resistance
- Significant increase in resin production

The secret to success is yours.
